2. To avoid abandonment of the application, appellant must exercise one of the following two options:

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Branick (US 3,917,250).

Branick discloses a device for folding a continuous medium comprising pivotable swing arm 10 which telescopes (upper 60 and lower arm 58) over one swing varying the

length to at least two different lengths with a minimum length at the center point and extended at the ends of the range; see figures 1-4.

5. Claims 1-4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Davis, Jr. (US 3,083,437).

Davis, Jr. discloses a device for folding a continuous medium comprising pivotable swing arm which telescopes (upper 10 and lower arm 12) over one swing varying the length to at least two different lengths with a minimum length at the center point and extended at the ends of the range; see figure 1.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 5 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Branick (US 3,917,250) in view of Martin et al. (US 5,062,597).

Branick does not directly disclose a table, which moves vertically nor has a detection mechanism for controlling vertical movement. However Martin et al. describe a vertically controlled table 47; see figure 1. Sensors 40 detect proper positioning of the stacked paper and control raising and lowering of the table according to preset values; see column 5, lines 55-68.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to include the teachings of Martin et al. in the invention of Branick in order to manipulate the folds and the stacks without interference.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
